The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/536,879	Applicant(s) HARADA ET AL.	
	Examiner Scott Kastler	Art Unit 1742	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese'018. Japanese'018 teaches, in the English language translation for example, a method of production of a thermoelectric material with a density of 95% or more of the theoretical density through compressing fine powder at between 0.5 and 3 GPa (overlapping the instantly claimed range of 1-10 GPa) and employing a further heat treating step on the same type of materials as the materials treated by the instant invention. It has been well settled that where a range disclosed by the prior art overlaps a claimed range, then absent any demonstrated new or unexpected result arising therefrom, motivation to select any value within the prior art range including those also within the claimed range would have been a choice prima facie obvious to one of ordinary skill in the art at the time the invention was made. See MPEP 2144.05. Since the starting materials are the same the processing steps are the same and the resulting product densities are the same, it would be reasonable to one of ordinary skill in the art at the time the invention was made to expect the resulting crystal sizes, resistivities and conductivities to also be substantially the same.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sadatomi et al is also cited as a further example of prior art.
